

Countries in TABLE A have full coverage supported by the SIM that comes with the Nordic Thingy:91 and will work out of the box. Countries in TABLE B have either LTE-M or NB-IoT coverage, however, participants from these countries will need to source a SIM Card from their local provider.

The hardware WILL NOT work out of the box without a compatible SIM card.

If your country does not appear in either of the tables, then unfortunately you are unable to participate in the contest.
